

WHAT IS CLAIMED IS:

1. A receiver for digital broadcasting capable of displaying
a major channel provided every broadcasting station for
distributing programs and a subchannel in selection among
5 subchannels provided every program distributed by the
broadcasting station according to the major channel,
comprising:

storage section for storing the major channel and plural
receivable subchannels broadcast by the broadcasting station
10 according to the major channel,

major channel output section for outputting the major
channel stored by said storage section,

differentiation section for differentiating between the
subchannel in selection and the subchannels stored in the storage
15 section other than the subchannel in selection, and

subchannel output section for outputting the subchannel
in selection differentiated by said differentiation section
and the subchannels other than the subchannel in selection.

20 2. The receiver for digital broadcasting as defined in claim
1, wherein

said differentiation section is constructed so that the
subchannel in selection and the subchannels other than the
subchannel in selection are set to different colors.

3. The receiver for digital broadcasting as defined in claim 1, wherein

said differentiation section is constructed so that the subchannel in selection and the subchannels other than the subchannel in selection are set to different fonts.

4. The receiver for digital broadcasting as in claim 1, wherein

said differentiation section is constructed so that a font size of the subchannel in selection and a font size of the subchannels other than the subchannel in selection are changed.

5. The receiver for digital broadcasting as in claim 1, wherein

said differentiation section is constructed so that the subchannels stored in said storage section are sorted according to a predetermined condition.
